Open Tuesday – Friday 8am –5pm  
Saturday by Appointment Only

### ***Transmission Flush Service*** *(yearly)*

For longer transmission life and better performance

#### **The Benefits of a Wynn's Transmission Flush Service:**

- Helps smooth rough, hard shifting problems
- Safely removes harmful sludge and varnish deposits
- Extends transmission fluid life
- Removes contaminated fluid from the transmission system
- Helps stop and prevent leaks
- Revitalizes transmission seals and o-rings

Our repair shop does not just drop the pan and replace the transmission fluid that is present in the pan. That usually is about 25% of the fluid. Instead, we use Wynn's Transmission Machine which flushes out 100% of the transmission fluid and we replace it with new fluid. At the same time, this machine tests the pressure flow of the transmission which gives us an idea of the condition of the tranny.

### ***Fuel Injection Service*** *(yearly)*

Machine hooks up to fuel injectors directly and flushes out dirt, varnish and gum. Restores injectors to proper spray patterns to improve fuel economy and engine performance. (Recommended service with every tune-up)

#### ***Cooling System Service*** *(every 2 years)*

For the prevention of overheating and mechanical breakdown

#### **The Benefits of a Wynn's Cooling System Service:**

- Helps ensure proper heating
- Provides the best method of factory recommended cooling system service
- Protects against coolant contamination
- Removes rust and scale deposits that can cause overheating & breakdowns
- Protects against cooling system leaks
- Helps prevent corrosion build-up and foaming
- Prevents coolant from freezing which can cause engine damage
